PROFESSIONAL SUMMARY

Motivated 18-year-old Python Developer & Automation Engineer specializing in rapid product delivery, API integrations, web scrapers, and automated test frameworks. Highly proficient in leveraging modern AI-assisted engineering tools (Cursor, Copilot, Antigravity) to design, build, and deploy production-grade async microservices, bots, and test suites 5x faster.

Trilingual (**English B2/C1**, **Polish B2 certified**, **Russian Native**). Possesses **Polish National D Visa with full work authorization in EU**. Seeking remote or Poland-based roles in **Python Automation**, **Backend Development**, **QA Automation**, or **L2/L3 Integration Support**.

TECHNICAL STACK

Languages:

Python (AsyncIO) OOP Type Hints SQL Bash basic JavaScript/TypeScript

Backend & APIs:

FastAPI Pydantic v2 SQLAlchemy 2.0 (Async) Redis Flask aiogram v3 REST APIs

WebSockets Webhooks

QA Automation & Testing:

Playwright (Python) Pytest (fixtures markers parametrization) Page Object Model (POM)

Selenium Postman Allure

Databases:

PostgreSQL SQLite Redis (caching) sliding window rate-limiting

DevOps & Cloud:

Docker Docker Compose Git/GitHub Actions Linux (Bash) Nginx VPS deployment

Scraping & Automation:

BeautifulSoup Scrapy HTTPX (async requests) cron jobs data pipelines

FEATURED PROJECTS

High-Performance URL Shortener & Analytics Gateway

- *Stack:* Python 3.11 | FastAPI | Redis (Sliding Window) | PostgreSQL (SQLAlchemy 2.0) | Docker | Pytest
- Built an async URL shortener & click analytics API with Redis sliding-window rate-limiting (`ZSET`).
- Achieved $O(1)$ redirect performance using Redis caching, bypassing DB reads.
- Implemented non-blocking background analytics workers logging device, OS, browser, and IP metrics.

[github.com/klmtzz/fastapi-url-analytics]

Pytest & Playwright QA Automation Framework

- *Stack:* Pytest | Playwright (Python) | Page Object Model | Allure | Docker
- Developed a modular QA Automation framework using Page Object Model (POM) architecture.
- Implemented Data-Driven Testing (DDT) with parametrized test markers (`@pytest.mark.smoke` , `@pytest.mark.regression`).
- Containerized execution with official Microsoft Playwright Docker images.

[github.com/klmtzz/pytest-playwright-suite]

Autonomous Job Search Orchestrator & Data Pipeline

- *Stack:* Python 3.11 | AsyncIO | aiogram v3 | HTTPX | SQLite | Docker
- Built a concurrent crawler scanning 15+ international job boards in parallel with rate-limiting semaphores and retry backoff.
- Integrated rule-based heuristic scoring engine and automated Telegram alert dispatching.

[github.com/klmtzz/job-hunter-bot]

Async Order Processing Microservice

- *Stack:* FastAPI | Async PostgreSQL | Redis | Pytest-asyncio | Docker Compose
- Designed RESTful CRUD microservice with Pydantic v2 schemas and async database sessions (`asyncpg`).
- Included full async unit/integration test suite and multi-container Docker Compose setup.

EXPERIENCE

Freelance Python Developer & Automation Engineer | Self-Employed

2024 – Present

* Designed and deployed custom REST APIs, Telegram bots, and web scraping scripts for clients.

* Built automated data collection pipelines extracting structured JSON/CSV data from complex web interfaces.

* Containerized client applications using Docker Compose and managed deployments on Linux cloud VPS servers.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

Software Engineer Degree (In Progress) | *2024 – Present* | Minsk, Belarus

* Focus: Software Engineering, Algorithms, Databases, Web Development.

LANGUAGES & PERMITS

-  **Polish National D Visa** — Legal work authorization in Poland / EU.
-  **English:** Upper-Intermediate / Advanced (B2/C1) — Fluent written & spoken.
-  **Polish:** Intermediate / B2 (State Certified) — Business communication ready.
-  **Russian / Belarusian:** Native.
